Apartment Community website's features developed using Drupal

facilitating description of the amenities and features offered by them

premium features in the website designed and developed quickly and easily thereby reaching a wider set of audience
About the Client

Liveoverture.com helps senior people discover new opportunities for luxury within their gorgeous communities. It contains a variety of designer living and choice of resort concept amenities with extensive array of mind-body-social amenities. Overture is more than a 55+ active adult rental community, it’s a lifestyle designed to help everyone take pleasure in every moment – past, present, and future.

Requirements

To develop some features in the website Liveoverture.com, facilitating description of the amenities and features offered by them. Features can be enumerated as Community Listing page, Multisite, Local area section in multisite, Floor Plans, Photos & Videos listing, Modern Living, Experiences & Events, Resources, Contact Us

Challenges

We were tasked with creating premium features in the website that could be designed and developed quickly and easily thereby reaching a wider set of audience. They also wanted that the visitors should be able to learn about any of the locations (wherever LiveOverture’s properties are located), quickly. All this could help them increase quality business leads and expand their online presence.
The website has various sections describing all the facilities and features Overture is offering.

- Modern Living - Depicts all the Features, Amenities, and Services
- Experiences & Events
- Floor Plans: Here, real time data is being fetched
- Contact Us - Developed a Webform for this

The above features were custom developed.

Technologies Used

- Drupal 7
- Css
- Javascript
- Php
- Multisite feature: Wherever Overture’s properties are located, each has a separate website connected to the main site. So we built this multisite feature which enables visitors to reach any particular location’s website easily
- Local Area section in multisite: A map shows all the local areas around Overture’s property location.
